The Future of Army Medicine

AMSUS 2018

LTG Nadja Y. West

44th U.S. Army Surgeon General and

Commanding General, U.S. Army Medical Command

November 2018

FOUO

As of: 12/4/2018 3:43 PM

THE ARMY
STRATEGY

DEPLOY, FIGHT, AND WIN

The Army will remain expeditionary. All Army units will be trained and proficient in their ability to deploy, whether it is a strategic deployment from the United States or an operational deployment within a theater.

JOINT

The Army will train and fight as a member of the Joint and Multinational Team. Our doctrine, tactics, and equipment must be complementary to and interoperable with our sister services, allies, and partners.

MULTI-DOMAIN

The Army must be able to fight not only in the land, sea, and air using combined arms, but also in all domains, including cyber, space, and the electromagnetic spectrum.

HIGH INTENSITY CONFLICT

The Army must be ready to conduct major operations and campaigns involving large-scale combat with Division and Corps-level maneuvers against near-peer competitors.

DETER

The Army will maintain its conventional deterrence capability with a combination of combat-credible forward forces, robust alliances, and a demonstrated ability to reinforce a region rapidly.

IRREGULAR WARFARE

The Army will continue to conduct irregular warfare, whether it is counterterrorism, counterinsurgency, or advise and assist operations, and we must train, exercise, and assess these skills to sustain our competence.

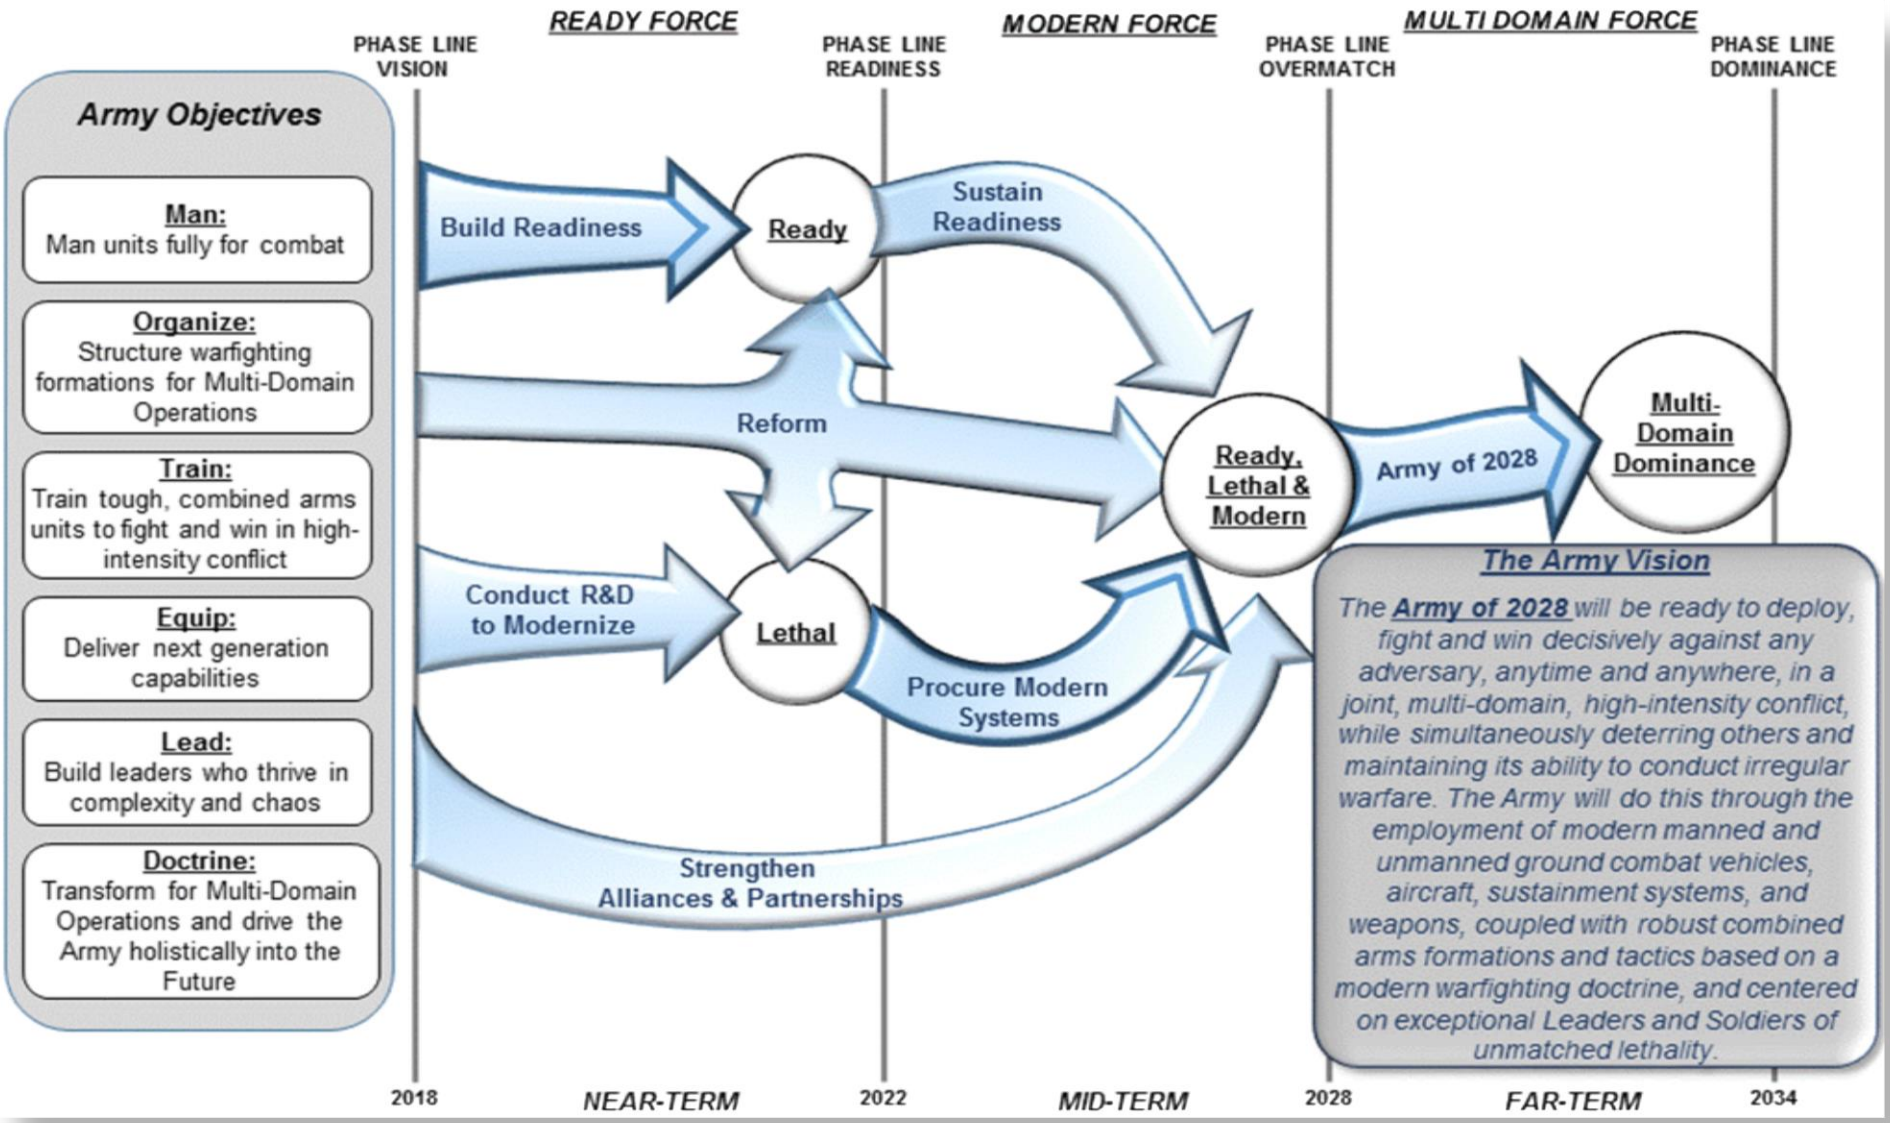
MODERNIZATION

The Army must build the next generation of combat vehicles, aerial platforms, and weapons systems, and start fielding them by 2028. These systems must be more agile, lethal, resilient, and sustainable on the future battlefield while under constant surveillance and attack. Our systems must also be upgradeable and incorporate robotics, artificial intelligence, and other technologies as they mature.

LEADERSHIP

The Army will prioritize development and promotion of smart, thoughtful, and innovative leaders of character who are comfortable with complexity and capable of operating from the tactical to strategic level.

A Transforming Army



Transforming Army Medicine to Support the Army and Joint Force

Continued Focus on Readiness

Army Medicine Lines of Effort

- **Readiness And Health** (Decisive Operation)
- **Healthcare Delivery** (Shaping Operation)
- **Force Development** (Shaping Operation)
- **Take Care of Ourselves, Our Soldiers for Life, DA Civilians, & Families** (Sustaining Operation)

End State:

Army Medicine of 2025 and beyond, as an integrated system for health, is the Nation's first choice for prompt and sustained expeditionary health services.

Cross Functional Teams

- Long Range Precision Fires
- Next Generation Combat Vehicle
- Future Vertical Lift
- Synthetic Training Environment
- Network
- Air and Missile Command
- Soldier Lethality
- Assured Positioning, Navigation and Timing

Organizational Changes

- MRMC to AMC
- AMEDD C&S to TRADOC
- Reverse PROFIS
- MTFs to DHA
- MEDCOM Reorganization

What Does Not Change
